

I. AMENDMENTS TO THE SPECIFICATIONS

Please replace the paragraph beginning at page 10, line 1 and ending at page 10, line 9 with the following amended paragraph:

Fig. 1 further illustrates an infant as user 18 clearly employing slide 10 as a recreational device. In this instance, user 18 is supported by membrane 19 in the form of low friction durable sheeting material as more clearly depicted in Fig.6 and discussed hereinafter with regard to that figure. Both membrane [6] 19 and top surface 20 can each be composed of low friction high durable materials such as a member selected from the group consisting of nylon, Teflon, sailcloth, Dacron, vinyl, artificial turf, synthetic carpet and polyester resins. This enables user 18 to traverse top surface 20 in a dry state without need for an optionally induced wet surface through the injection of water through jets 21.
